

CHIPPER FEEDING CONVEYOR

GK Vibratory Chipper Feeding Conveyors deliver controlled material flow to boost efficiency in wood processing operations. Rugged and reliable, they're built to perform in demanding environments.

CONSISTENT FLOW DURABLE DESIGN SMART INTEGRATION

The GK Chipper Feeding Conveyor is built to optimize wood processing with a reliable, consistent flow of material. Designed for efficiency and durability, it integrates seamlessly into high-volume operations, boosting performance while reducing energy consumption and maintenance.

PELLETIZATION • PULP AND PAPER MILLS • CHIP MILLS • BOARD INDUSTRY BIOMASS POWER PLANTS • SAWMILL OPERATIONS

- ***Provides consistent and controlled material feeding, optimizes the performance of hammer mills, flakers, and eco pulsers, and improves overall process efficiency.***
- ***Vibratory drive system operates with lower horsepower, resulting in significant energy savings compared to traditional feeders.***
- ***Capable of handling a wide range of materials and adaptable to various industrial processes.***
- ***Low-maintenance, maximum uptime for reliable performance.***
- ***Custom-engineered for your operation.***

Boost the performance and longevity of your wood processing equipment with GK Vibratory Chipper Feeding Conveyors.
