EASE-OF-ACCESS TO VIBRATORY COMPONENTS

Torque Smarter

Designed by the people who design General Kinematics equipment, the Titan™ torque drive system simplifies and improves vibratory equipment maintenance.

Torquing springs to spec ensures that your equipment runs properly, prolonging the overall life of your vibratory equipment. Thanks to the GK Titan™ Torque Tool's light and flexible design, it can be used on tricky loose spring brackets or any bolt that is not easily accessible with the average torque gun.
