

SAND MIXER

Elevate Your Sand Mixing

The Tuffman® Sand Mixer combines General Kinematics' proven water addition technology with on-belt sand mixing in one compact, efficient machine. The continuously controlled mixing prepares sand for further processing through agitation, aeration, mixing, and blending.

The water addition system uses a proprietary control system to monitor sand temperatures, mixing just the right amount of water to aid in further sand processing. With a low cost investment and easy maintenance, there is no better machine per dollar for the job.

Why Tuffman® Sand Mixers

- The combination of cutting wheels and helical wheels breaks down lumps while providing superior blending action for any combination of bonding agents, water, and sand.
- Sand leaves mixer with more uniform properties prior to mulling and will result in an overall better sand quality.
- Sand aeration provides uniform "fluffy" sand and proper water ratios.
- Modular Design: Stack sections as needed.
